PROFESSIONAL SUMMARIES

Data Analyst with 3+ years of experience transforming data into business strategies. Proven track record in leveraging SQL and Python to automate reporting workflows, reducing manual effort by 40%.

EXPERIENCE

Data Analyst

Mar '24 — Present

Amazon

India

- Created data extraction workflows using Python and **Selling Partner API** to retrieve real-time inventory and sales data for European marketplaces sellers.
- Analysed Fulfillment by Amazon (FBA) metrics, including Inventory Performance Index (IPI), Sell-Through Rate, and Excess Inventory Percentage, helping sellers avoid storage restrictions and costly fees.
- Managed inventory reconciliation by auditing ledger reports and partnering with fulfillment teams to resolve discrepancies, maintaining a 99%+ accuracy rate.
- Delivered actionable product solutions and growth strategies to sellers by identifying trends in Sales Velocity, Stockout Rates, and Days of Inventory on Hand through SQL and statistical modeling.
- Improved operational workflows by performing root cause analysis on stranded inventory and shipment delays, leading to a 40% increase in overall fulfillment efficiency in 2025.

Data Analyst

Sep '22 — Feb '24

Concentrix

India

- Engineered **ETL pipelines** using Python and SQL to extract high-volume datasets from AWS Redshift, reducing manual data processing time by 30%.
- Conducted data audits and reconciliation between AWS data warehouse and ERP module to identify and resolve data discrepancies.
- Wrote SQL queries (Joins, CTEs, Aggregations) to validate data integrity and ensure 100% accuracy in operational reporting for a US based client.
- Automated anomaly detection scripts in Python (**Pandas/NumPy**), decreasing data error rates by 80% and improving the speed of the audit lifecycle.
- Utilized Excel (Pivot Tables, VLOOKUP, Power Query) to synthesize complex audit findings into actionable reports for senior stakeholders.

SKILLS

Technical Excel, SQL, Power BI, Python, Machine Learning, Statistical Data Analysis, FastAPI

Analytics Data Cleaning, Data Visualization, Data Auditing, Data Modeling, ETL, Requirements Gathering, Root Cause Analysis, Data Governance, Regulatory Compliance, Time Series Analysis

Professional Team Collaboration, Project Management, Agile Methodology, Stakeholder Management

PROJECTS

Customer Churn Analysis [Link](#)

- Analyzed customer churn patterns across 7,000+ telecom records, identifying key drivers including contract type (75% churn in month-to-month vs 3% in two-year contracts), payment methods, and service subscriptions to reduce annual churn rates of 15-25%
- Developed an ensemble machine learning model using Voting Classifier (Gradient Boosting, Logistic Regression, AdaBoost) achieving 84.68% accuracy in predicting customer churn
- Built interactive data visualizations and statistical reports revealing that senior citizens, customers without dependents, and those with paperless billing showed higher churn propensity, enabling targeted retention strategies
- Delivered actionable business recommendations based on data-driven insights: promoting long-term contracts, encouraging automatic payment methods, and improving tech support services to reduce customer attrition and increase profitability

EDUCATION

B.Sc, Chhatrapati Shahuji Maharaj University (GPA: 6.2)

Kanpur, India

CERTIFICATIONS

Executive Diploma in Data Science and Machine Learning, Intellipaat

Nov '25
